

Peer Testing Instructions

Campus Resource Navigator (CRN)

1. Team Information

Group Name: Group 6, Campus Resource Navigator (CRN)

Team Members:

- Adam Joseph Polak
- Jack Harmer
- Thomas K Dang
- Logan Miles Lapierre
- Tristan Jarvey
- Connor John Leberg

Preferred Communication:

- MS Teams

2. System Overview

Campus Resource Navigator is a mobile app built for University of Wisconsin-Milwaukee (UWM) students. It provides a single hub where students can:

- Discover and navigate campus resources (tutoring, financial aid, academic support)
- Browse and search the course catalog
- View campus events on an interactive map
- Leave reviews on events

Authentication is handled via Auth0. The backend is a Deno/TypeScript REST API backed by PostgreSQL.

3. Access Instructions

Code Repository

<https://github.com/HawkerX/CRN>

App Releases

<https://github.com/HawkerX/CRN/releases>

Android Installation

The release section has instructions on how to install the app on your device, however, if needed, here is a guide as well...

1. Download the latest APK from the GitHub repository releases
2. Navigate to your downloads (files)
3. Click on the APK file
4. Follow the provided instructions

Note: Depending on the device, it may warn about the app and security. This can be ignored, and it will install just fine. It has already passed security checks.

IOS Installation

If you do not have an Android Device, you will need to install an emulator. Below are instructions for using Android Studio, but if you have a preferred emulator, follow those setup instructions.

1. Install Android Studio from: <https://developer.android.com/studio>
2. Download the latest apk from the Github repository's release section.
3. On Android Studio, select the Device Manager tab on the far right, and the plus button to add a device.
4. Select "Create Virtual Device", and the Medium Phone.
5. For the API tab, set it to API 36.1 and the System Image that is starred (recommended for your device)
6. Start the emulator and wait until the emulator is fully booted, and you are on the home screen.
7. Once on the home screen, drag the installed apk onto the home screen. A prompt will appear to show it is installing.
8. After installation is completed, the App "CRN" will be located under the "All apps" section of the emulator. (Can be accessed by clicking and dragging up on the home screen)
9. If testing location settings, you will need to set the emulators location. Click the three vertical dots on the bar above the emulators screen and a separate window should appear. Select the Location tab and choose somewhere near campus, then Set Location.

Guest / Demo Credentials

Auth0 handles all authentication. To test, register a new account through the in-app Auth0 Universal Login flow (tap Sign Up on the login screen). No pre-existing demo credentials are required.

Note: If you encounter Auth0 redirect issues, ensure your device/emulator has internet access and that the custom scheme `crnapp://` is not blocked.

4. Required Test Scenarios

For all tests, first login to the app, following the Auth0 steps in app.

Observing Events on Campus

Steps:

- [] 1. Navigate to the Events page, either through side navigation bar or home screen tiles.
- [] 2. Cycle between the Today, 3 Days, and This Week time frames, and view events present.
- [] 3. Select an event and view its details.
- [] 4. On UWM's website or look up the event and confirm details match.
- [] 5. Attempt to leave a review and view the event on the map.

Adding Classes

Steps:

- [] 1. Navigate to the My Classes page, either through side navigation bar or home screen tiles.
- [] 2. Search for a class and select it. From there, view the sections that are part of the class.
- [] 3. View the sections details and confirm that the details match your own classes, or ones through the UWM course catalog.
- [] 4. Add the section to your classes.
- [] 5. Navigate back to the home screen, and confirm the section appears under the My Classes section.
- [] 6. Additionally, confirm the class appears under the My Classes page.
- [] 7. Close and reopen the app to confirm that the class information persists.
- [] 8. Select the app and confirm on all screens that it has been removed.

Navigation to Event

Steps:

- [] 1. Navigate to the Map page.
- [] 2. Select either the Resources or Event pages and choose from the map a marker.
- [] 3. From that marker, click on the title of the resource/event on the popup and confirm navigation to the event/resources actual details page.
- [] 4. Return to the map and the pin, then select "Navigate" on the popup.
- [] 5. Observe that the polyline drawn goes from your current location to the pin and confirm that directions are correct and concise.
- [] 6. Press "End" to stop the navigating and ensure it closes the navigation popup cleanly.

5. Optional Test Scenarios

Location Permission Request

Steps:

- ☐ 1. Navigate to phone settings.
- ☐ 2. Navigate to location settings.
- ☐ 3. Disable location permissions.
- ☐ 4. Open app.
- ☐ 5. Navigate to Map
- ☐ 6. Observe window pop up that request's the user permission to access their location data.

External Link Tab Persistence

Steps:

- ☐ 1. Navigate to the Directory screen.
- ☐ 2. Open any event (like the Tutoring Center).
- ☐ 3. Tap "Open Website".
- ☐ 4. Navigate back to app from website.
- ☐ 5. Observe if app is open.

Live Navigation Feature (if on campus and able)

Steps:

- ☐ 1. Navigate to Map page.
- ☐ 2. Select an event or a resource from their respective map screens
- ☐ 3. Select "Navigate" on the popup
- ☐ 4. Actively follow the instructions that pop-up to the location that you selected
